

LOVE ...

... is all around but not exactly the sphere of activity Panthronics is focusing on. But we are in love working in an international startup company and being part of the development of innovative, game-changing new products.

We at Panthronics compete against the big fish in the semiconductor market by developing new approaches and revolutionary products. To expand our digital verification team, we are looking for young people who are deeply engaged with their work, are open to new challenges and, above all, love being real engineers.

Are you the right person? If you can answer the following three questions with YES, you might be the perfect match to join Panthronics!

- You are looking for engineering challenges exceeding the University level?
- You have experience in HW design/verification or are interested in learning it and have experience in programming languages (C, Java or similar)?
- You are a team player (most important point)

In case one or more of the following items are also on your list of experience so much the better: NFC/RFID knowledge, versioning systems (GIT, SVN), code quality, regression test frameworks.

What will you find in Panthronics (apart from given things, like coffee, salary and challenges): a motivated team, BBQ on the company terrace, good talks and a lot to learn!
